PROFESSIONAL SUMMARY

Experienced Software Quality Engineer & Quality Lead with 15+ years in the software industry, including over a decade of specialized expertise in software quality engineering. Skilled in leading QA practices, improving product quality, and supporting high-reliability releases across large-scale platforms. Strong technical foundation in automation and quality engineering, backed by earlier development experience. Demonstrated ability to integrate Gen AI & AI Agents into testing workflows to enhance efficiency, accelerate coverage, and elevate engineering outcomes.

QUALITY ENGINEERING SKILLS

- **Testing Types:** Functional, Integration, DB, Exploratory, Regression, Smoke, and User Acceptance Testing (UAT).
- **API:** API validation & API Test Automation.
- **Mobile Testing:** iOS & Android testing.
- **Automation Skills:** Playwright with JS & Robot Framework with Python.
- **AI Skills:** Using Gen AI & AI Agent in Software Testing & Automation Testing.
- **Black Box Techniques:** BVA, EP, Decision Tables, State Transitions.
- **White Box Techniques:** Statement Coverage (SC), Decision Coverage (DC).
- **SQL Skills:** SQL scripting for backend validation.
- **ALM Tools:** Familiar with TFS, JIRA, Azure DevOps.

CORE ROLE & RESPONSIBILITIES

- Leading QA practices and ensuring consistent quality standards across teams.
- Establishing and enforcing quality processes, workflows, and testing guidelines.
- Supporting high-reliability releases across large-scale platforms.
- Prioritizing testing efforts based on business and technical risks.
- Reviewing project artifacts (SRS, HLD, and related technical documents).
- Guiding automation direction and ensuring alignment with product architecture.
- Coordinating with product, development, and business teams to align quality goals.
- Designing high-coverage test cases & business scenarios aligned with business goals
- Coaching team members on testing techniques, tools, and best practices.
- Identifying defects, analyzing root causes, and collaborating with dev teams
- Ensuring full Requirements Traceability Matrix (RTM) application.
- Preparing Status Reports & Release Readiness Reports for stakeholders.
- Guiding automation coverage using Playwright & Robot Framework.
- Operating within Agile/Scrum project management methodologies.
- Involved in Functional, Automation, Integration, DB, and UAT.
- Executing SQL Scripts for database queries and verification.
- Leveraging Gen AI & AI Agents to optimize automation workflows.
- Driving quality strategy, risk-based testing, and release readiness decision.
